Commvault Adds Intelligent Data Services Features to Fortify Ransomware Security

February 15, 2022

Enhanced cloud integration supports new security capabilities

TINTON FALLS, N.J., Feb. 15, 2022 /PRNewswire/ -- Commvault (NASDAQ: CVLT), a recognized global enterprise leader in intelligent data services across on-premises, cloud, and software as a service (SaaS) environments, today announced General Availability for Feature Release 11.26. These enhancements to our best-in-class Intelligent Data Services help to harden infrastructure against attack and improve recoverability, continuing Commvault's commitment to mitigating cyber threats—including ransomware—in any infrastructure: on-premises, in the cloud, and even across multiple clouds.

The new enhancements include:

- Utilizing hardware-based security tokens, along with common access card support, helps to strengthen customers' security posture
- Leveraging highly secure cloud authentication methods, including the AWS Key Management System (KMS) and Azure Key Vault
- Extended Disaster Recovery orchestration now includes Object Storage and Big Data File Systems, to accommodate larger datasets.

"Today's enhancements are focused on rock-solid cybersecurity principles and architected for the cloud, while continuing to protect on-premises data. Our commitment to constant innovation and industry-leading Intelligent Data Services means that our customers are always able to combat the latest threats, no matter where their data lives. And new integrations with public cloud providers offer cloud-native support for today's most critical workloads," said Ranga Rajagopalan, Vice President of Products, Commvault.

Complete documentation of all the features and capabilities included with this release can be found at https://documentation.commvault.com/11.26/essential/143030_feature_release_1126.html.
