Media Alert: CommVault Announces General Availability of QiNetix ContinuousDataReplicator

June 22, 2006

-- CDR Connects Critical Remote Office Data to the Enterprise --

Oceanport, N.J. — June 22, 2006 —CommVault®, a provider of Unified Data Management™ solutions, today announced general availability of ContinuousDataReplicator (CDR), Version 6.1 software, extending CommVault's support for the remote office market. A component of the CommVault QiNetix Unified Data Management suite, CDR is fully integrated with and aware of key enterprise applications such as Microsoft Exchange and SQL Server. CDR can be configured as a stand-alone replication solution or as part of a comprehensive QiNetix data management solution.

Under a single policy, CDR software integrates file-level data replication with snapshot, backup and archiving functionality. CDR incorporates innovative technologies which provide point-in-time recovery, reduce network traffic and support rapid deployment. Consistent Recovery PointsTM maintain data and application consistency while offering multiple point-in-time snapshots for roll-back recovery., Rapid re-sync in the event of a network outage quickly re-establishes replica integrity. Finally, Out-of-Band Synchronization™ is an offline feature for initial replication of large data sets over limited network bandwidth.

For enterprise customers with remote offices, CDR delivers continuous data protection and leverages the unified benefits of CommVault's QiNetix product suite for cost-effective, high performance disaster recovery and data protection.
