CommVault Defines Modern Data Management

- With Simpana 9 software, CommVault has reinforced its heritage of providing one common software platform with centrally managed, scalable and automated capabilities to deliver the ultimate in data management.
- New migration tools and reporting capabilities dramatically ease the process of converting from legacy configurations to Simpana 9 software.
- Additionally, this latest release raises the bar in backup and recovery by enabling customers to slash backup windows by more than 30 percent and restore data in minutes with enhanced backup and recovery, snapshot technology and deduplication functionality.
- Simpana 9 software also protects hundreds of virtual machines (VMs) in minutes while seamlessly scaling to accommodate thousands of VMs without forcing customers to make any compromises on data access or availability.
- Fully integrated source- and target-side deduplication keep data growth in check and facilitates efficient and fast data reduction.

About CommVault

A singular vision - a belief in a better way to address current and future data and information management needs - guides CommVault in the development of Singular Information Management(R) solutions for high-performance data protection, universal availability and simplified management of data on complex storage networks. CommVault's exclusive single-platform architecture gives companies unprecedented control over data growth, costs and risk. CommVault's Simpana(R) software modules were designed to work together seamlessly from the ground up, sharing a single code and common function set, to deliver superlative Data Backup, Archive, Replication, Search and Resource Management capabilities. More companies every day join those who have discovered the unparalleled efficiency, performance, reliability, and control only CommVault can offer. Information about CommVault is available at www.commvault.com. CommVault's corporate headquarters is located in Oceanport, New Jersey in the United States.
